## Landslide Hazard Areas

WADNR Landslides

Steep Slopes (≥40°)

The landslide hazard areas shown on the map consists of areas from two diffierent sources and have been used for planning purposes.

1. The WA DNR Landslide Area polygons have been provided by the Washington State Department of Natural Resources (WADNR) - Division of Geology & Earth Resources. This dataset has been provided at a scale of 1:24,000 and contains the extent of mapped landslides in the state of Washington, compiled from pre-existing landslide databases created in many different divisions throught WADNR to meet a variety of purposes and missions of this agency. (May 2013)

2. Steep Slopes: These areas depicted on the map were provided by Island County GIS. These areas were derived from 2001 LIDAR data and represents areas in the county at a slope of 40 degrees or larger.
