Standard or Goal:

Figure 1. Island County Group A/B drinking water systems that meet standards for acceptable levels of total coliform*

*Data points were obtained by:

Downloading bacteria sampling results from DOH for all Group A and Group B water systems, from 2001 to 2014

For each year, count how many Group A water systems were active = NumSys

For each year, walk through all systems that were active that year, and count how many had sampled for bacteria (at least once) = NumSampled

For each year, walk through all systems that were active that year, and count how many had one or more positive bacteria detections (bad) = NumPresence

% Collect Samples (Year) = $100 * \text{NumSampled} / \text{NumSys}$

% Meet Standard (Year) = $100 - (100 * \text{NumPresence} / \text{NumSys})$

% Meet Standard 2 (Year) = $100 - (100 * \text{TotalNumPresence} / \text{TotalSamples})$
