

Lighting – Key Questions

Parking area lighting for multi-family or mixed use areas are proposed as follows:

Question- Is this too high? What about 15 or somewhere in between?

Hours of Lighting – Proposed regulations require that all (non-essential) exterior lighting be reduced (dimmed) by 50% within one hour after close of business or 10:00 p.m., whichever is later, leaving only the necessary lighting for site and building security pursuant to ICC 17.06.570.H.7. For purposes of this section, non-essential lighting includes display lighting, aesthetic and sign lighting, lighting of landscape and architectural features, and may include parking lot lighting.

Question- Instead of 50% dim, do we want an all off (except for security lighting)? Or keep it at 50% dim? Should this be varied by season since dark hours are so extensive in the winter and limited in the summer?
